

vetOvation Surgical System

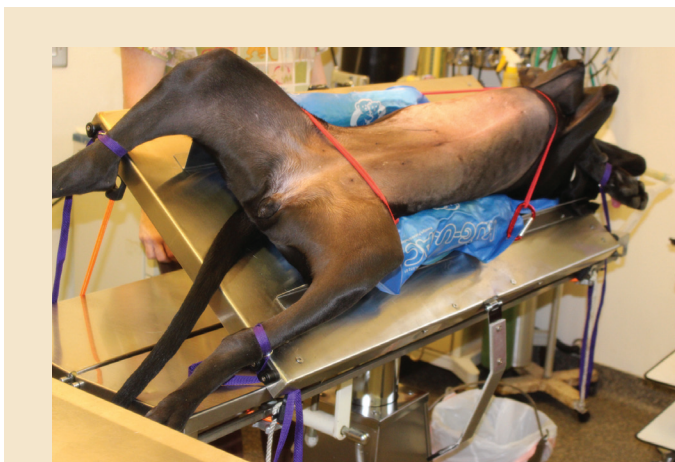

"Our practice has adopted the vetOvation Surgical System for laparoscopic spay, tissue biopsy and cystoscopy. VetOvation has played a vital role training 13 of our veterinarians to perform laparoscopic procedures. We realized a positive ROI from the equipment in just 13 months. This technology has become an integral part of our practice and our clients recognize the patient benefits associated with minimally invasive surgery."

Advanced Vessel Sealing Technology

The Aesculap Caiman is an easy-to-use vessel sealer that provides secure hemostats for vessels up to 7mm in diameter during open and laparoscopic procedures. The Caiman Technology is safer than current techniques and it reduces the duration of a surgery. The Caiman results in less anesthesia, blood loss and trauma with better outcomes and more satisfied pet owners.

vetOvation Tilt Table

The vetOvation tilt table conveniently attaches to any operating room table and enables side-to-side rotation of an animal during laparoscopic and endoscopic procedures.
